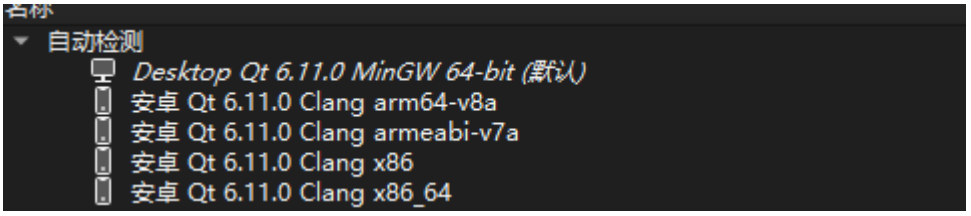
Qt6 安卓环境配置

系统详情

- Qt版本为：Qt6.11



官方要求的安卓开发环境为：

Supported Configurations

The following configurations are supported in this Qt release:

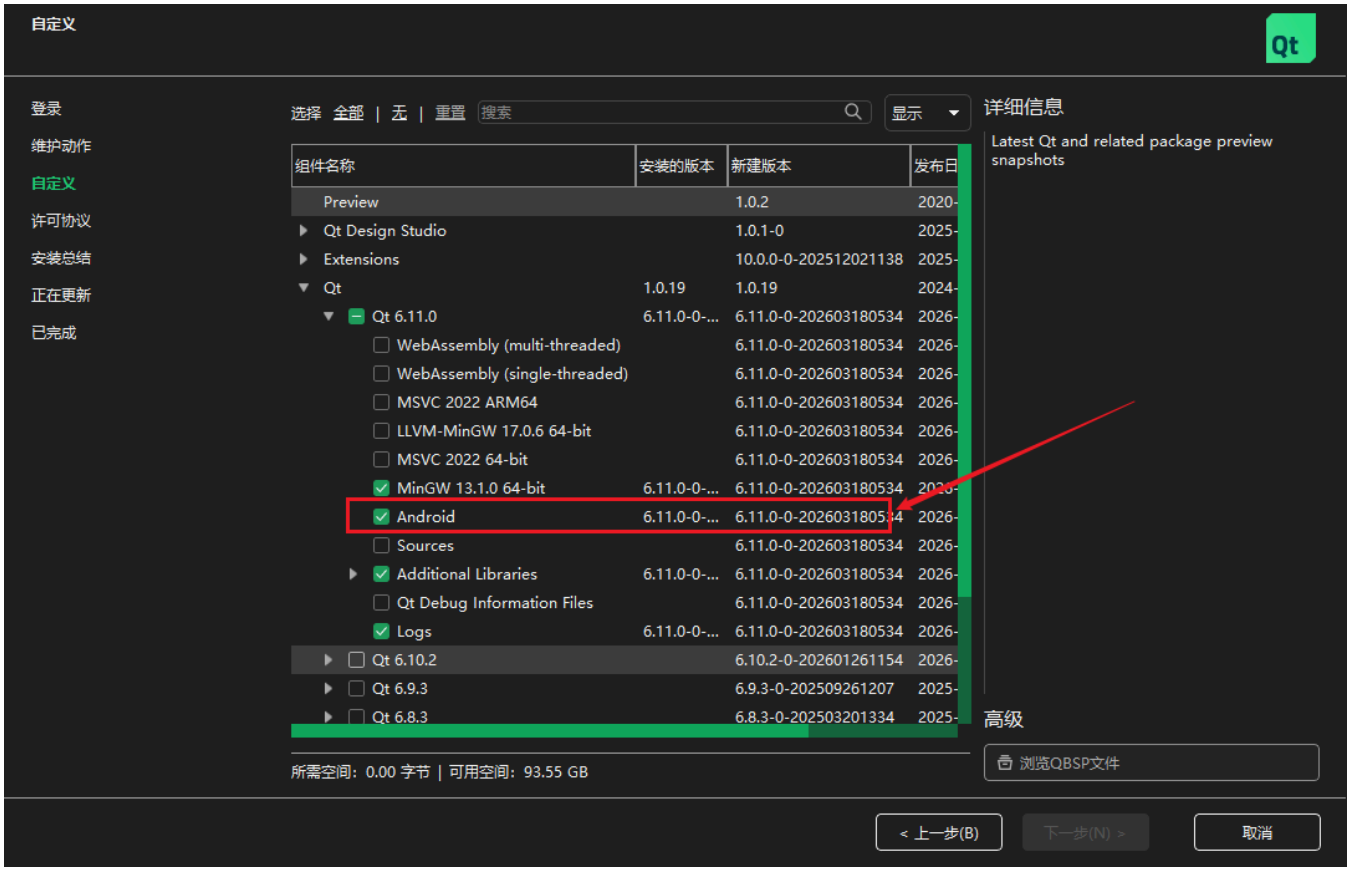
Section	Description
Distribution	Android 9 (API 28) **to** 16 (API 36)
Architecture	`arm64-v8a`, `x86_64`, `x86`, and `armeabi-v7a`
Compiler	Clang 17.0.2 (NDK r27c or 27.2.12479018) **Note:** It's recommended that Qt apps use the same NDK version used for building the official Qt for Android libraries to avoid missing symbol errors. In releases supporting multiple NDKs, the newest supported NDK is used for building Qt.
JDK	JDK 21
Gradle	Gradle 9.3.1 and AGP 9.0.0
Package	Multi-ABI APKs, AABs and AARs **Note:** Multi-ABI builds are available only when using CMake. For more information, see CMake Android Multi-ABIs.

- JDK 21
- NDK r27c

这两个很重要。

安装QtAndroid模块

打开 `MaintenanceTool`：



这个 Qt6.11 下的 `Android` 组件必须要安装。

使用 `AndroidStudio` 配置环境

因为Qt后续用到的环境：

- JDK 21
- NDK r27c

均可以使用 `AndroidStudio` 配置完毕，所以使用此工具。

安装完毕后，打开：

```
File | Settings | Languages & Frameworks | Android SDK
```

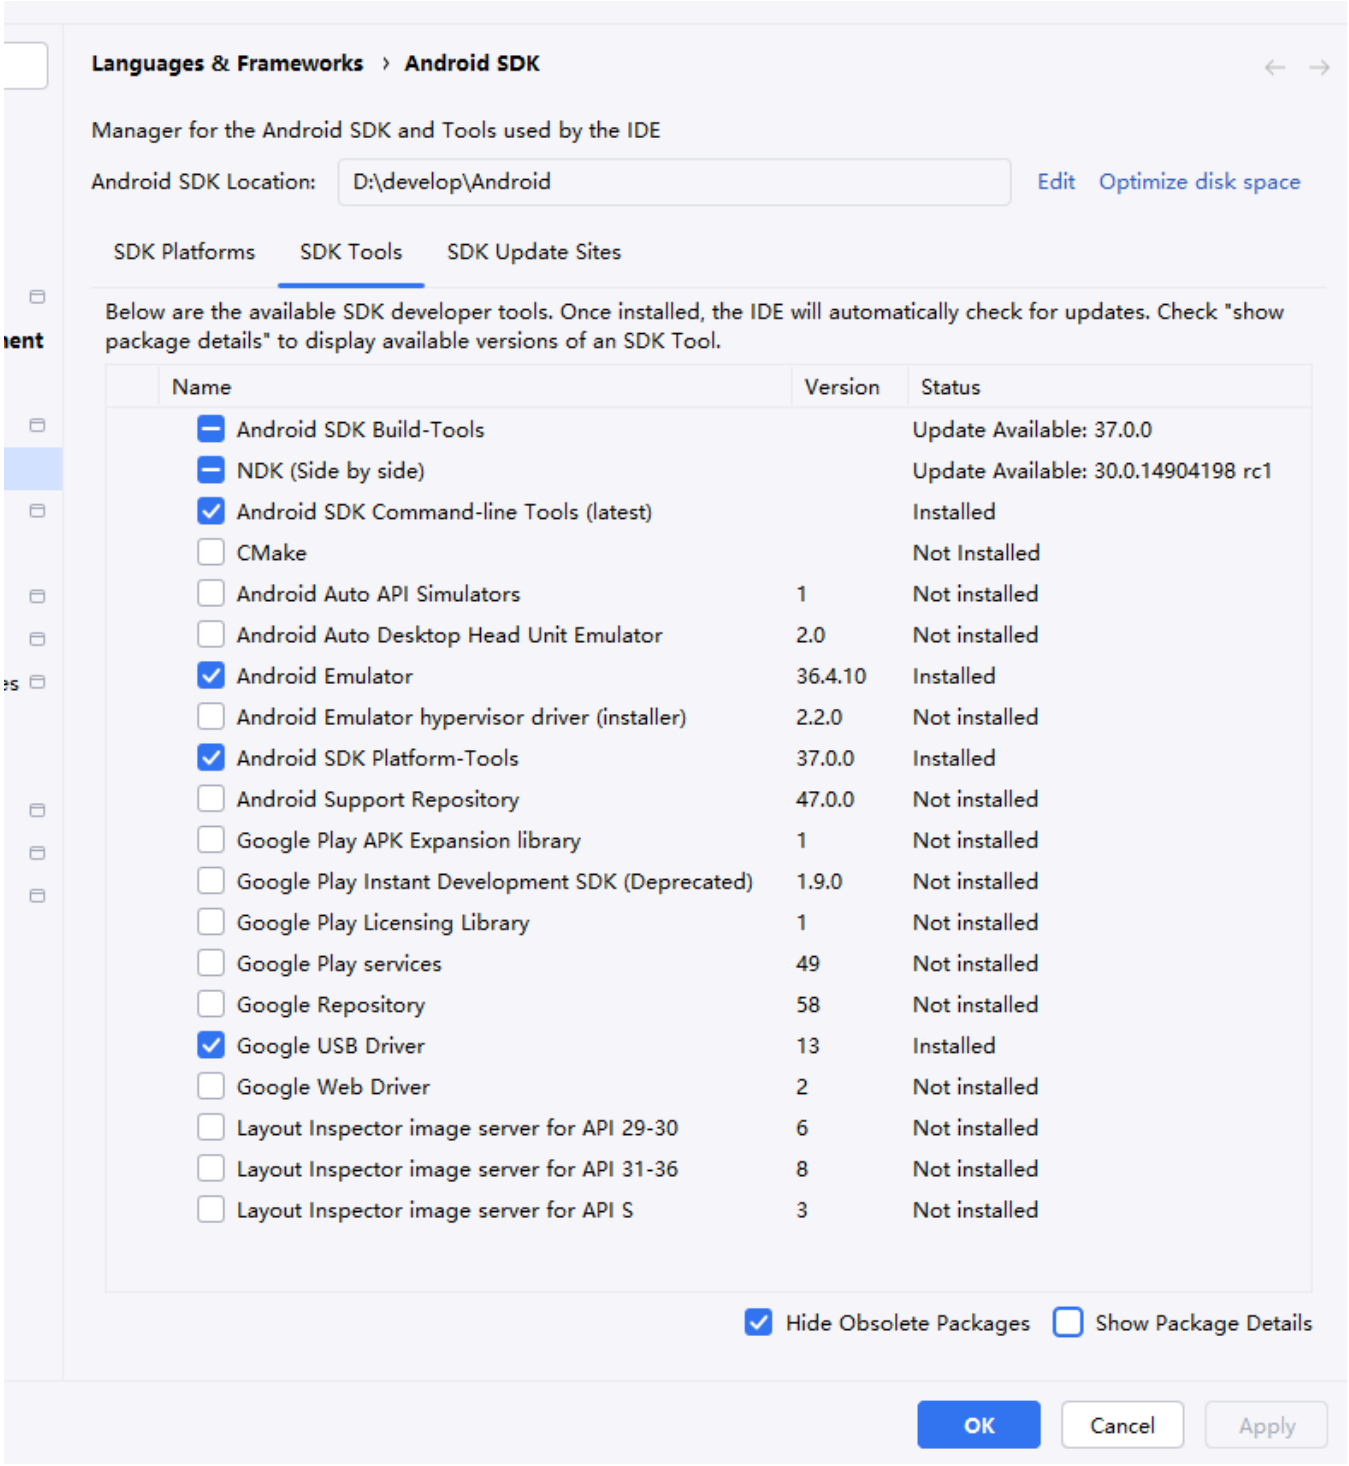
这个 NDK 版本千万别选错了。

选中 NDK 版本后，我们将 `Show Package Details` 勾选取消，然后选中以下部分：

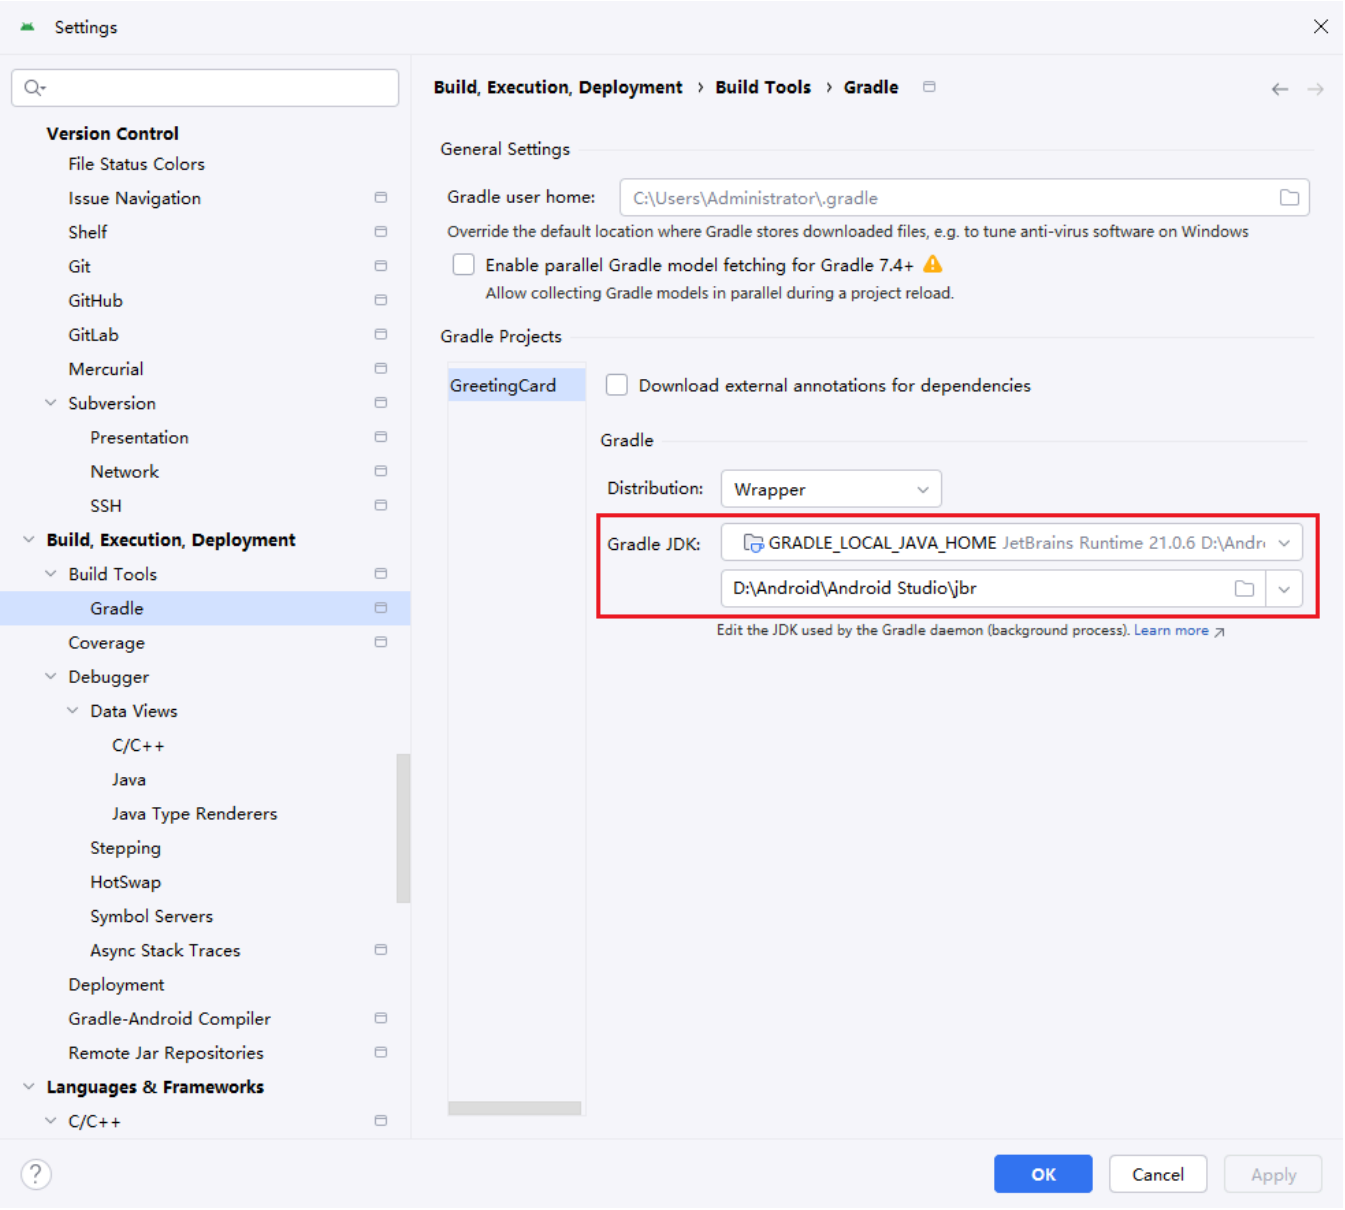


这样就安装完毕了。

JKD21

这里偷了个懒，直接使用 `AndroidStudio` 自带的 JDK 21 即可：

```
File | Settings | Build, Execution, Deployment | Build Tools | Gradle
```



Qt Creator配置

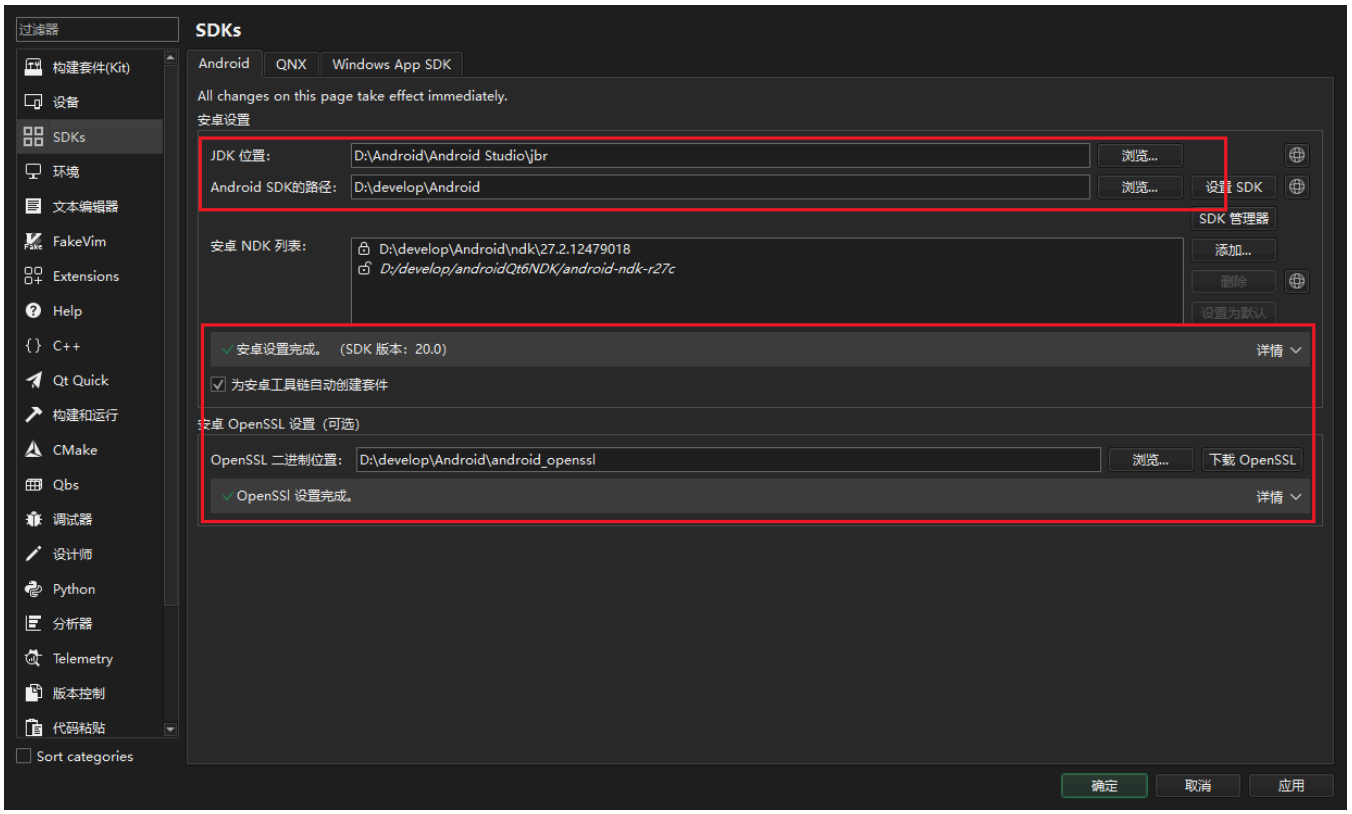
在

```
编辑 - Preferences - SDKs
```

将之前的：

- JDK 路径：`D:\Android\Android Studio\jbr`
- SDK 路径：`D:\develop\Android`

填入即可。



OpenSSL 随意。
